

Quick Start

Three steps. No account with us, nothing to install.

1. Open the file

Double-click scopesnap.html. It opens directly in your web browser — Chrome, Edge, or Safari all work.

2. Add your free AI key

Click "Settings" in the top right and paste in a free OpenRouter API key. Full step-by-step walkthrough is in the included setup guide — takes about 5 minutes, no credit card.

3. Make your first quote

Type (or paste) a customer's job request, click "Extract scope," adjust anything that needs it, add your pricing, and download or email the finished estimate.

Stuck on the key setup specifically? See the full setup guide included in this download — it covers every step and the most common error messages.
